

Cleaning and Care Instructions

Cleaning: We recommend cleaning your Sage Doors Invisedge® Doors and Panels by using a damp microfiber cloth. Wipe off any excess residue afterwards with a dry cloth to ensure a streak-free appearance.

Greasy marks can easily be removed by using a small amount of soap or other non abrasive cleaner.

Avoid: Although Invisedge® is waterproof, it is not 100% water resistant. The core of the door is still MDF, which is prone to swelling when exposed to repeated water or damp conditions. Spray bottles, sponges, wet cloths, steam cleaners, and other such cleaning agents can leave a lot of water on the face and/or edge of the doors, and should be avoided. Doors should be wiped on the bottom edge to avoid water pooling.

Care should be taken to ensure hot pans and appliances do not come into contact with Invisedge®, as this can damage the surface of the door.

Never use abrasive cleaners to clean your Invisedge® doors. If unsure, test a small patch, or phone us (09 415 6322) to check first.

Warranty

All Invisedge® doors and panels come with a 10 year guarantee to the original purchaser against defects in the materials. Sage Doors must be notified of any defects as soon as possible, within 10 years of the date of purchase.

Frequent and repeated moisture and water can penetrate through the edge. Care should be taken to ensure edges are not exposed to continuous or excessive steam and water, and that the bottom of the doors are wiped dry to avoid water damage.

The guarantee will not apply in cases where the product has been damaged after manufacture through misuse, negligent cleaning, water damage, or maintenance.

Liability will be limited to replacement of the doors and panels. Sage Doors Ltd will not meet any costs of refitting or installation. Under no circumstances will liability exceed the current purchase price of the original goods.
